Materials Management Memo

September 28, 2016

ISSUE no. 2

2.1 Special Waste Approval Process

For the purpose of this permit, special waste is defined as: any waste material which, because of its physical, chemical or biological characteristics requires special handling procedures, or poses an unusual threat to the environment, equipment, property, and the public health, welfare and safety. These materials should not be confused with any material listed on the Unacceptable Waste List. Unacceptable waste items are prohibited and cannot be accepted at the SWMF at all.

In the event that you would like to dispose of special waste at the Authority SWMF (Solid Waste Management Facility), there is a step by step process that you must adhere to. The information you will need is available on the Authority website. www.danc.org. Once there click on *Solid Waste Management* and scroll down. At the bottom of the screen you will see the required downloads that you will need to read and complete.

2.2 Special Waste Profile

If you would like to dispose of special waste at the authority SWMF, you are required to complete an Appendix A Special Waste Profile. You must provide the Authority with all of the information requested on the form, sign the self-certification stating that you will agree with the terms of the program and submit it to swmfspecialwaste@danc.org for consideration. These terms include special waste analytical requirements that are outlined in Appendix B along with the general sampling quantities required by volume.

2.3 Coordination

Once special waste is permitted to be disposed of at the facility, the hauler will coordinate with the SWMF customer service coordinator to initiate and schedule disposal. This is an important step, because these materials require special handling at the landfill for proper and safe disposal. Special handling requirements at the SWMF can be time consuming, so preplanning is a critical component of our success and yours.
